

Due to the increasing rates of overdoses due to opicids such as Fentanyl, many public entities including schools are starting to carry opicid antagorists. Nalowone is an opicid antagorist which can be used in emergency situations to slow or stop the effects of a drug overdose. One of the most common forms of nalowone is Narcan Beginning the 2023 2024 school year; all IDEA schools will carry nalowone as part of emergency response equipment.

Natorone is a medication that conneverse an overdose that is caused by an opicid drug such as a prescription pain medication or Fentanyl. Most commonly, it is a masal spray. According to the CDC, natorone can be given safely to people of all ages, from infants to older adults. This includes an adolescent cryoung adult who may have unintentionally taken an opicid. Natorone will not harmsomeone if you give it to them and they are not overdosing on an opicid.

Perstate law, a person who, acting in good faith and with reasonable care, administers or does not administer an opicid antagonist such as nalowone or Narcan to another person whom the person believes is suffering an opicid related drug overdose is not subject to criminal prosecution, sanction under any professional licensing statute, or civil liability, for an act or omission resulting from the administration of or failure to administer the opicid antagonist.

Emergency services personnel are authorized to administer nalowone to a person who appears to be suffering an opicid related drug overdose, as dirically indicated. Emergency services personnel are categorized as staff who provide services for the benefit of the public during emergency situations. At IDFA, Campus Gisis Team Members are considered emergency services personnel and will be trained in how to identify emergency situations that may necessitate the use of nalowone and how to properly administer emergency medication

Nalowone will be stored in the emergency bag or cart which is to remain in the diric at all times. The diric doors must remain locked when not occupied by the campus Health Aide, Nurse, or trained diric backup staff member:

Parents must be notified of the school's adoption of a ralewore policy. Parents do have the option to opt-out of allowing the energency administration of ralewore for their child due to allergy or other reasons. Parents must submit decision to opt-out in writing. A list of students whose parents opted out of ralewore energency treatment must be stored with the medication on campus.

If ralowone is used, the staff member who administered the medication must complete a <u>Nalowone Reporting</u>

<u>Form</u>, detailing the nature of the incident, the care the individual received, and the fact that the nalowone was deployed Nalowone Reporting Forms must be completed within 24 hours of the incident, and sent to the Risk Management, Safety & Security, and Student Health & Wellness department leads.
